SUMMARY

Backend Software Engineer with 2+ years of experience building Java services for identity and access management, payment systems, and serverless order processing, delivering 60% faster startup and 40% lower latency.

EDUCATION

Birla Institute of Technology, Mesra

B.Tech in Information Technology (8.80 CGPA)

Ranchi, India

November 2020 - May 2024

WORK EXPERIENCE

Visa (Cybersource)

Software Engineer

Bengaluru, India

June 2025 - Present

- Built Java 17/Vert.x identity services for merchant lifecycle management on Visa's payment platform, coordinating dual-database persistence and Kafka event streaming across 5M+ user accounts.
- Implemented SAML-based single sign-on (SSO) and directory-group provisioning across a multi-tenant hierarchy for 100+ roles.
- Shipped a zero-downtime password-hashing upgrade from SHA-256 to SHA-512 across gateway services, seamlessly upgrading legacy credentials at login.
- Developed an internal Model Context Protocol (MCP) tool for plain-English database queries, used by 500+ engineers daily, accelerating debugging and incident investigation.

Openreach

Software Development Engineer

Bengaluru, India

August 2024 - June 2025

- Migrated an order-processing service from Spring JPA to Quarkus with stored procedures, cutting cold-start time by 60% for serverless deployment.
- Optimized JDBC and database calls, decreasing network roundtrips and cutting response time by 40%.
- Reduced serverless costs by 45% through efficient resource utilization and optimized stored-procedure execution.

Openreach (BT Group)

Software Engineer Intern

Bengaluru, India

January 2024 - July 2024

- Migrated a product-availability service to Quarkus 3.8, reducing startup time by 40% and enabling AWS Lambda.
- Implemented resilient SOAP/ESB integration, sustaining 99.9% uptime across 1,000 daily availability checks.

PROJECTS

Open Source Contributions

- Arroyo** (April 2025): Added string-slice argument support to Rust user-defined aggregate functions.
- Zen Browser** (December 2024): Removed the MSYS2/WSL dependency from Windows builds, enabling native builds.

Cacher | *Redis, Node.js, PowerShell, Azure*

July 2023

- Designed a distributed caching system with automated Azure scaling using Redis and PowerShell.
- Integrated Bloom filters and consistent hashing to improve cache lookup efficiency with minimal memory use.
- Engineered a cross-platform cache-management CLI with real-time resource monitoring and provisioning.

TECHNICAL SKILLS

Languages: Java 17, SQL, Rust, Python, PowerShell

Backend & APIs: Vert.x, Spring Boot, Quarkus, REST APIs, Microservices, Kafka

Data: Oracle, Microsoft SQL Server, Redis, Stored Procedures

Cloud & DevOps: GCP, AWS Lambda, Docker, Kubernetes, Helm, Argo CD, Jenkins, CI/CD, Git

Testing & Security: JUnit, Mockito, OAuth 2.0, SAML SSO, SAST

Core CS: Data Structures & Algorithms, Operating Systems, DBMS

ACHIEVEMENTS

Codeforces | [vinam5](#): Max rating 1450+; global rank 1276 in Round 780 Div 3 amongst 22,000+ participants.

LeetCode | [mishravinamra5](#): 571 problems solved, including 138 hard; contest rating 1,795.
